

## Science & Technology News Release

### Sunlite receives UL listing for its SunStrip30 Series

December 11, 2013

**Sunlite Science & Technology passed UL testing for an LED strip light perfect to utilize in a cove, hang above a desk, wash a wall in light, or replace old troffers.**

LAWRENCE, KS, USA – Sunlite Science & Technology announces that its LED SunStrip30 Series is officially UL listed.

The new SunStrip30 series is a continuation of the six year history that Sunlite has in the strip light industry and the 18 year history in the LED industry. UL approved in December of 2013, the SunStrip30 product line includes LED interior and exterior strip fixtures ranging from 4” to 6’.

“The SunStrip30 rounds out the Sunlite’s strip light product family,” said Kirsten Oswald, Sunlite Science & Technology Designer, “by offering a fixture that can be used for the demarcation space by light and colour. And we hope it will be a wonderful new tool in any LED lighting designer’s tools box.”

These lights are available from 500 lumens to 3,700 lumens, with a 5 year warranty, and multiple choices in color temperature for residential and commercial markets.
